                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           - Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of collaboration with the Beckeley Drosophila Genome Project (BDGP)

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's Laboratory in the Department please see http://www.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org.fruitfly.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CNS0039G 1101 bp

Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by two proteins are organized that the sequence of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (09 MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA on Dec 17, 1999 this sequence version replaced gi:4581138. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 101365)

The methods and products can be used for targeting expression specifically to the endosperm of the seeds of cereal plants such as wheat or barley. They can be used for the expression of e.g. antisense sequences of granule-bound synthase (GBSS), SBE II, low moi. Wt. glutenin, grain softness protein I, bacterial isoamylase, bacterial glycogen synthase, and wheat high moi. Wt. glutenin BxI7. They can be used for modifying the characteristics of starch produced by a plant. The present sequence represents the SBE II gene sequence

                                                                     The present sequence encodes a wheat starch branching enzyme of Aegilops tauschii, designated F2. A. tauschii is likely to be the ancestral D genome donor of wheat. Probes isolated from the present sequence were used to identify type II starch branching enzymes (SBI in wheat, especially BEIID. The BEIID nucleic acids may be used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to vary levels of amylopectin and/or amylose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5470
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5410
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5350

The specification describes BEIIb. BEIIb is a type II starch branching enzyme (SBE). The BEIIb nucleic acids ne used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to vary levels of amylopectin ar amylose produced in the plant.
                                                                                                                                                                                         1159
